

## Symptoms of Hearing Loss

Hearing loss is so common that 11% of the population or 36 million Americans experience some form of hearing loss. While it is not life threatening, hearing loss can negatively impact your job performance, your relationships with family and friends, and ultimately your own physical well-being. Here is a quick hearing check.

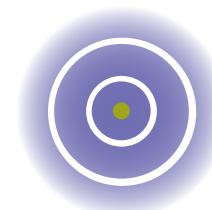

### Do You...

- Have difficulty understanding conversations, especially in noisy settings?
- Misunderstand some words in a sentence and need to ask people to repeat themselves?
- Have trouble hearing things on the TV or have the volume set at levels that annoy others?
- Think people mumble? (or don't speak clearly?)
- Find that women's and children's voices are difficult to hear?
- Have family or friends who have told you they think you have a hearing loss?
- Misunderstand what others are saying and give inappropriate responses?
- Avoid social activities because you cannot hear well and fear you will reply improperly?
- Have ringing, clicking or buzzing in your ears?
- Have noticeable hearing loss in one or both ears?

If you answered yes to any of the questions, we suggest you make an appointment with one of our professional hearing health care specialists at Woodard Hearing Centers. We can evaluate your hearing and determine if hearing aids can help you. Don't delay another day. Take the first step toward a world of better hearing.

# Offering You...

**Communication is key to the relationships we have and to our quality of life.** It is what makes us successful in the workplace and in our interactions with other people. When someone has a hearing loss it interferes with those relationships. We experience feelings of frustration, embarrassment and of being left out. Hearing loss also causes frustration in those around us. We find social situations with family and friends the most difficult to enjoy and we end up watching life go by rather than engaging in life and connecting with other people.

**At Woodard Hearing Centers, we keep you in-the-know about hearing loss and solutions.** Our comprehensive hearing evaluations include assessing information on your activities and lifestyle in order to recommend the best hearing technology for you. You can even try on the technology and experience how crisp and clear sounds and communication can be. Woodard Hearing Centers also provides regular educational seminars. In addition, Woodard Hearing Centers offers "Beyond Hearing Aids," a new and exciting class discussing many strategies to hear better.

**Woodard Hearing Centers is independently owned and offers 16 convenient locations in Des Moines and Central Iowa.** Our professional Staff and Audiologists have years of experience and expertise and will work with you to customize a solution which best meets your needs. Let us be a part of your wellness team when it comes to your hearing health.

- ✓ Complete Line of Hearing Accessories
- ✓ Custom Ear Molds for Hearing Protection, Personal Listening Devices, Call Center Headsets, Swim Plugs and More
- ✓ Industrial Testing & Occupational Hearing Conservation Services
- ✓ Interest-Free Financing Options

## Hearing Is Not A Luxury

**Better hearing is not out of reach. The cost for a state-of-the-art pair of hearing aids is just \$2.47 per day. Woodard Hearing Centers also offers a 12-month, no-interest payment plan. There is no pre-payment penalty and no down payment.**

### CIC - Completely-in-the-Canal

CIC hearing instruments are the smallest custom-designed hearing instrument available today. They fit deeply inside your ear canal which makes them practically invisible.

### ITC - In-the-Canal

ITC hearing instruments are custom-designed and small enough to fit almost entirely in your ear canal. They are hardly noticeable.

### ITE - In-the-Ear

ITE hearing instruments are custom-made hearing aids made to fit within the external ear. Their size allows for them to be easily handled.

### BTE - Behind-the-Ear

BTE/Open Fit hearing aids fit comfortably behind the ear and are attached to either an open dome or custom earmold that directs sound from the instrument into the ear. BTE models are versatile and can fit a variety of hearing losses.

### RIC - Receiver-in-the-Canal

Receiver-in-the-Canal hearing aids uniquely place the receiver in the ear canal offering comfort, optimum placement and they are virtually invisible when worn.
